Reading Log

Component	Entry
Entry #	R001
Date	October 12, 2025
Title	Real-Time Object Detection with YOLOv8: A Comprehensive Review
Source / Website	arXiv / ResearchGate (2023)
Text Type	Research Article / Computer Vision
Text Level	B2+
Topic / Theme	YOLOv8, Object Detection, Computer Vision
Length (In Page)	12 pages
Difficulty (1–5)	4/5
New Vocabulary	Inference, Backbone Network, Precision-Recall, Anchor-free
Key Career Insights	Understanding the latest iteration of YOLO is crucial for developing efficient real-time detection systems in robotics.
Recommendation	★★★★★

Component	Entry
Entry #	R002
Date	October 15, 2025
Title	Implementation of Intrusion Detection System using Snort on Linux
Source / Website	International Journal of Computer Applications (2022)
Text Type	Technical Paper / Cybersecurity
Text Level	B2+
Topic / Theme	IDS, Snort, Network Security, Linux
Length (In Page)	10 pages
Difficulty (1–5)	3/5
New Vocabulary	Packet Sniffing, Rule-based Detection, Vulnerability, Firewall
Key Career Insights	Learning Snort configuration is essential for system administrators to protect network infrastructures from malicious attacks.
Recommendation	★★★★☆

Reading–Writing Journal

RWJ Entry 1

B2+ Level (Week 1 of 8)

Writing Prompt Response: “Object Detection Evolution in AI”

Entry: 1/8 – Week 1

My Journal Entry:

In Entry R001, I read a comprehensive review regarding YOLOv8, the latest version of the "You Only Look Once" object detection family. The article explains how this model achieves higher accuracy and faster inference speeds compared to its predecessors. I learned about the shift to an anchor-free detection system, which simplifies the model architecture significantly. This reading is highly relevant to current trends in computer vision as it provides a technical foundation for implementing real-time vision in autonomous systems. Understanding these performance metrics helps in optimizing the balance between detection speed and precision in practical engineering applications.

Word Count: 112

RWJ Entry 2

C1 Level (Week 1 of 8)

Writing Prompt Response: “Securing Networks with Open Source Tools”

Entry: 2/8 – Week 1

My Journal Entry:

Entry R002 discusses the practical implementation of Snort as an Open Source Intrusion Detection System (IDS) on Linux platforms. The paper details how to write custom rules to detect specific network threats and monitor suspicious traffic in real-time. I found the explanation of packet sniffing and log analysis particularly useful for understanding how security layers operate. This reading has increased my proficiency in Linux-based security management. It highlights the importance of proactive monitoring in maintaining the integrity of data within a local area network or a cloud environment, which is a vital skill for modern network engineers.
