Reading Log

Component	Entry
Entry #	R003
Date	October 20, 2025
Title	Socially Aware Navigation for Mobile Robots in Human Environments
Source / Website	IEEE Xplore (2023)
Text Type	Research Article / Robotics
Text Level	C1
Topic / Theme	Social Navigation, Human-Robot Interaction, Path Planning
Length (In Page)	14 pages
Difficulty (1–5)	5/5
New Vocabulary	Proxemics, Social Costmap, Trajectory Prediction, Obstacle Avoidance
Key Career Insights	Developing robots for public spaces requires not just technical navigation, but also an understanding of human social norms.
Recommendation	★★★★★

Component	Entry
Entry #	R004
Date	November 2, 2025
Title	A Survey on IoT Security Challenges and Solutions
Source / Website	Journal of Network and Computer Applications (2024)
Text Type	Review Article / IoT
Text Level	B2+
Topic / Theme	IoT Security, Encryption, Firmware, Authentication
Length (In Page)	16 pages
Difficulty (1–5)	4/5
New Vocabulary	Cryptography, Edge Computing, Botnet, Heterogeneity
Key Career Insights	IoT engineers must prioritize security at the hardware level to prevent large-scale data breaches in smart ecosystems.
Recommendation	★★★★☆

Reading–Writing Journal

RWJ Entry 3

B2+ Level (Week 2 of 8)

Writing Prompt Response: “Ethics and Logic in Robot Navigation”

Entry: 3/8 – Week 2

My Journal Entry:

This article focuses on the challenges of "Socially Aware Navigation," where robots must navigate through crowds without making humans feel uncomfortable. The study introduces the concept of "Proxemics," which defines the appropriate physical distance a robot should maintain based on social contexts. I learned how integrating social costmaps into path-planning algorithms allows robots to predict human movements more effectively. This is incredibly relevant for future robotics engineers. The insights from this paper help in designing a more polite and efficient autonomous system that respects personal space in crowded environments like restaurants or hospitals, making technology feel more natural and safer.

RWJ Entry 4

C1 Level (Week 2 of 8)

Writing Prompt Response: “The Risks of a Connected World”

Entry: 4/8 – Week 2

My Journal Entry:

Entry R004 provides a broad overview of the security landscape in the Internet of Things (IoT). The authors explain that because many IoT devices have limited processing power, traditional encryption methods are often too heavy to implement. I learned about the risks of botnets and how insecure firmware can lead to major vulnerabilities. The article also mentions how edge computing can help process data locally to enhance privacy. This reading has broadened my perspective on the technical responsibilities of a computer engineer when designing interconnected smart devices. It emphasizes that security should never be an afterthought in the development lifecycle.
