Reading Log

Component	Entry
Entry #	R009
Date	December 10, 2025
Title	Performance Analysis of Virtualization Technologies for Cloud Computing
Source / Website	IEEE Xplore / ResearchGate (2023)
Text Type	Research Article / Cloud Computing
Text Level	B2+
Topic / Theme	Virtualization, Hypervisor, Cloud Infrastructure
Length (In Page)	11 pages
Difficulty (1–5)	3/5
New Vocabulary	Hypervisor, Containerization, Resource Allocation, Scalability
Key Career Insights	Understanding the difference between virtual machines and containers is essential for building scalable cloud-based infrastructures.
Recommendation	★★★★☆

Component	Entry
Entry #	R010
Date	December 15, 2025
Title	Machine Learning for DDoS Attack Detection in Software-Defined Networks
Source / Website	Sensors Journal / MDPI (2024)
Text Type	Research Article / Network Security
Text Level	C1
Topic / Theme	SDN, Machine Learning, DDoS, Network Automation
Length (In Page)	15 pages
Difficulty (1–5)	4/5
New Vocabulary	Software-Defined Networking (SDN), Mitigation, Feature Selection, False Positive Rate
Key Career Insights	Automating network security using machine learning is a growing field that solves the problem of manual traffic monitoring.
Recommendation	★★★★☆

Reading–Writing Journal

RWJ Entry 9

B2+ Level (Week 5 of 8)

Writing Prompt Response: “The Architecture of Modern Cloud Systems”

Entry: 5/8 – Week 5

My Journal Entry:

In Entry R009, I studied the various virtualization technologies that power modern cloud computing. The article provides a detailed comparison between Type-1 hypervisors and the more lightweight containerization methods like Docker. I learned how resource allocation affects the overall performance and scalability of a cloud environment. This is particularly interesting because it explains how thousands of users can share the same physical hardware efficiently. Understanding these layers of abstraction is crucial for my career as a computer engineer, especially when deploying complex applications that require high availability. It has given me a clearer picture of how back-end infrastructures are managed in a professional setting.

Word Count: 116

RWJ Entry 10

C1 Level (Week 5 of 8)

Writing Prompt Response: “Automating Security in Smart Networks”

Entry: 5/8 – Week 5

My Journal Entry:

Entry R010 explores the use of machine learning algorithms to detect Distributed Denial of Service (DDoS) attacks within Software-Defined Networks (SDN). The researchers describe how SDN provides a centralized view of the network, making it easier to collect data for AI models. I learned that feature selection is the most critical step in reducing the false positive rate during threat detection. This reading bridges my interests in networking and artificial intelligence perfectly. It highlights how the next generation of networks will be self-healing and capable of automatically mitigating threats without human intervention. This insight is very valuable for understanding the future of secure, automated digital communications.
